

Electrical Wiring for Appliances

Appliances which draw larger loads of electricity, like dryers and stoves, should be designated to a direct electrical line to prevent broken connections and fires. Some older homes were built without direct lines, which is now required by the National Electric Code. Generation 3 Electric can inspect your home's appliances and upgrade your electrical wiring for appliances as well as the everyday safe use of the following:

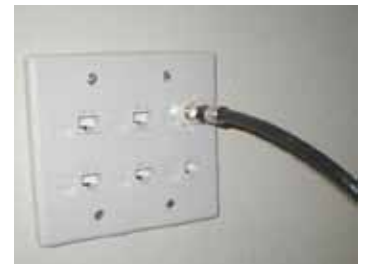

Direct Lines

Appliances Lines

Entertainment System Wiring

Home Computer Networks

Window A/C Units

Tripping & Overloaded Circuits

A/C Wiring
